## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of Species in the reply filed on 10/26/06 is acknowledged. Applicants did not give reasons for the traversal. The requirement is still deemed proper and is therefore made FINAL.

The examination is therefore being done for fluorescent label and the nucleotide as elected.

After examining the elected species for the nucleotide, no prior art was found. The examination has been extended to the next species of nucleotide.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 37, 39, 40, 46-48 are rejected under 35 U.S.C. 102(a) as being anticipated by Stemple (WO00/53805).

Stemple discloses a nucleotide analogue comprising a base and unique label linked to the base via a cleavable linker, a deoxyribose and a cleavable chemical group to cap an OH at the 3'-position. (see Figure 1 and pages 12-14).

Claims 37, 39, 40, 45-48, are rejected under 35 U.S.C. 102(e) as being anticipated by Anazawa et al (US 6,136,543).

Anazawa discloses a nucleotide analogue identical to the instant invention (see figures 7, 16-19).

Claims 38, 49 and 50 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
